

## Industrial Production Indices in December 2010<sup>1</sup>

The preliminary data showed that the Industrial Production Index<sup>2</sup>, seasonally adjusted<sup>3</sup>, decreased by 1.0% in December 2010 as compared to November 2010.

In December 2010 working day adjusted<sup>4</sup> Industrial Production Index rose by 5.2% as compared to the same month of 2009.

**Figure 1. Industrial Production Indices**

(2005 = 100)

<sup>1</sup> December 2010 data are preliminary.

<sup>2</sup> Monthly Industrial Production and Industrial turnover indices measure changes in **production and turnover values** of industrial enterprises. This information can be used to access the current economic development and for short-term forecasts. Indices do not measure the actual production level, it aims to measure the average change in value of production between two points of time

Indices are compiled on the base of information collected through representative sampling survey on industrial enterprises. The sample covers enterprises with annual turnover more than 97% of total turnover in industry.

Industrial production indices are calculated at constant base year (2005) that is to say they are weighted with the structure of the value added at factor costs in the base year.

<sup>3</sup> **Seasonal adjustment** is a statistical method, which eliminates the seasonal component of time series and it is particularly suitable for long-term comparisons and analysis of the data.

<sup>4</sup> **Working day adjustment** is an adjustment for variations caused by calendar effects, different number of calendar and working days in the months, national holidays and outliers (for example the presence of more non-working days in May could contribute to the decline in the production in some activities).

The seasonally and working day adjusted data on Industrial production index for the period 2000-2010 can be found in NSI internet web-site: (<http://www.nsi.bg/otrasalen.php?otr=46>).

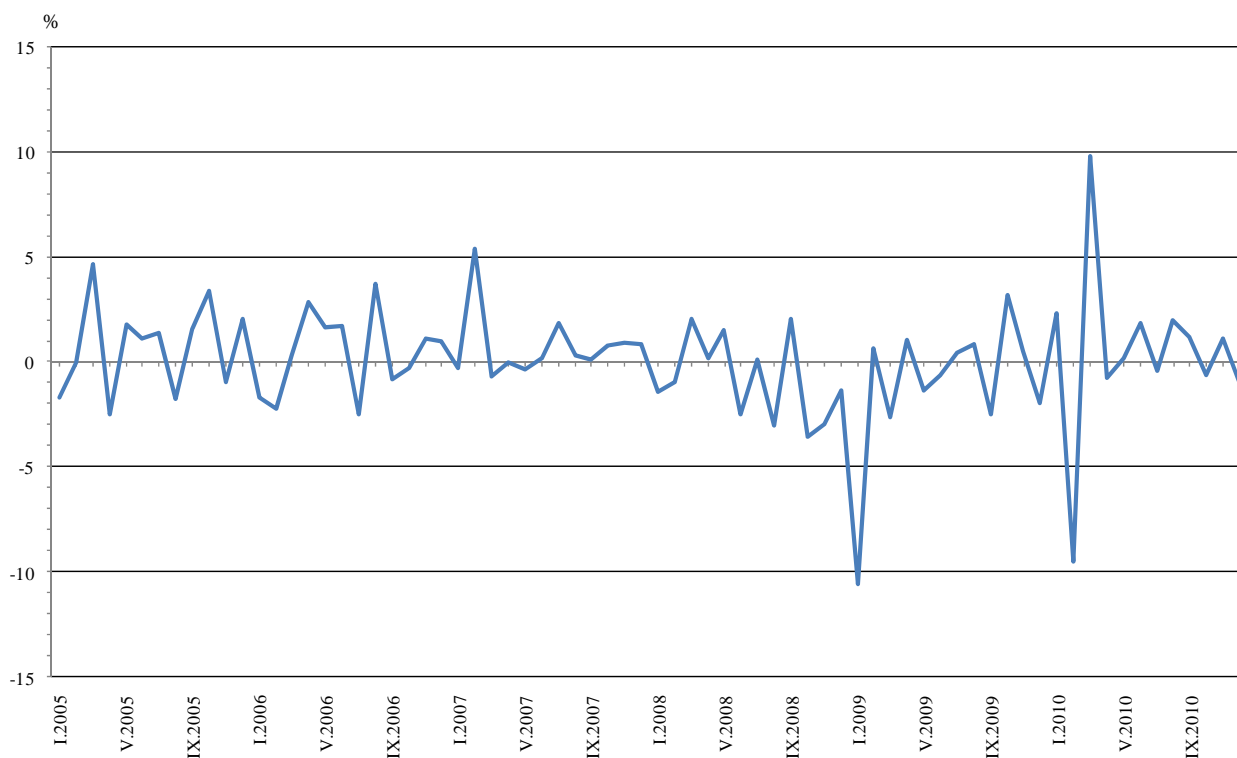

### Monthly comparisons

In December 2010 as compared to November 2010, the seasonally adjusted Industrial Production Index in the mining and quarrying industry decreased by 7.1%, in manufacturing by 4.3%, while in the electricity, gas, steam and air conditioning supply the increase by 3.2% was registered.

The most significant decreases of production in the manufacturing were seen in the manufacture of chemicals and chemical products by 21.2%, in the manufacture of fabricated metal products, except machinery and equipment by 20.7%, in the manufacture of other non-metallic mineral products by 10.9%, in the manufacture of beverages by 8.2%. There were increases in the repair and installation of machinery and equipment by 20.3%, in the manufacture of tobacco products by 7.4%.

**Figure 2. Percentage changes of Industrial Production Indices compared to the previous month (seasonally adjusted)**

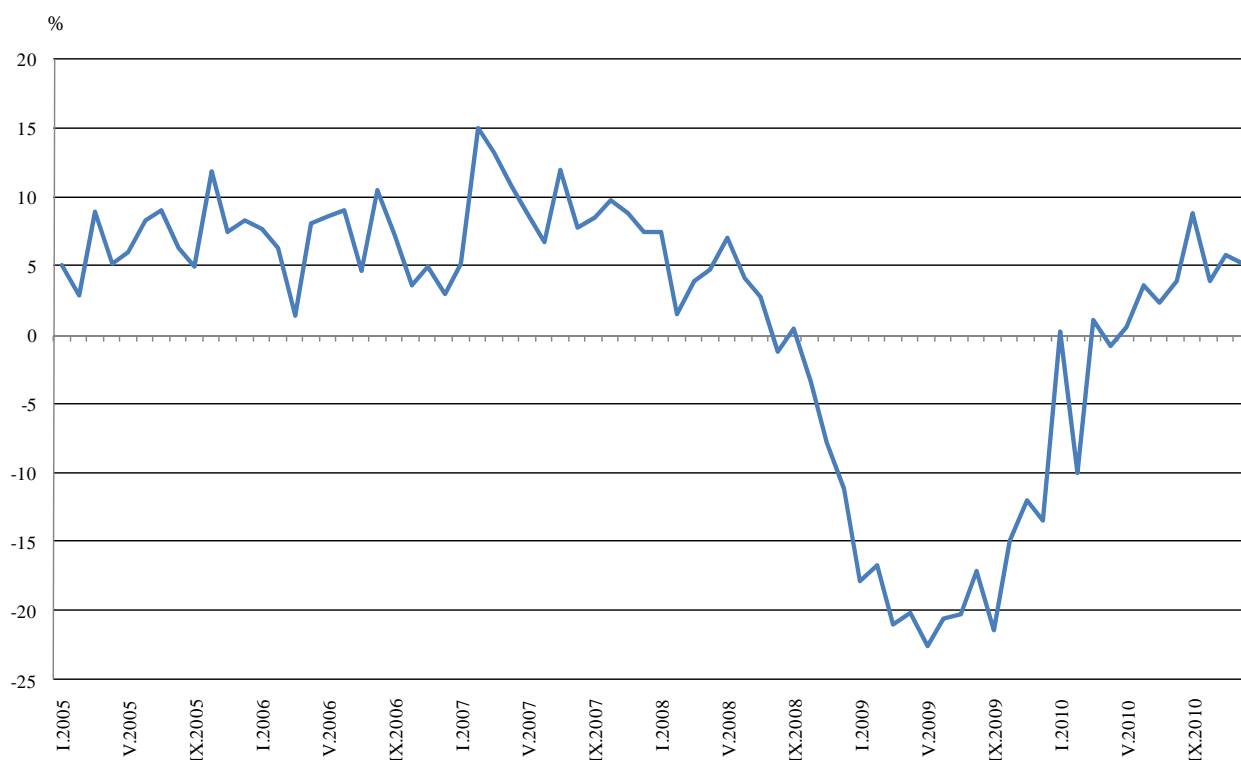

### Annual comparisons

On annual bases in December 2010 Industrial Production Index, calculated from working day adjusted data in the manufacturing grew by 7.9%, in the electricity, gas, steam and air conditioning supply by 0.8% and in the mining and quarrying industry by 0.3%.

Increases were registered in the production of investment goods by 16.9%, in the production of intermediate goods by 6.9%, in the production of energy by 2.0%.

**Figure 3. Percentage changes of Industrial Production Indices compared to the same month of the previous year**  
(working day adjusted)

The final data on Industrial Production and Turnover Indices for November 2010 can be found in NSI internet web-site: (<http://www.nsi.bg/otrasalen.php?otr=46>).
