

PRODUCTION AND DELIVERIES OF ENERGY PRODUCTS, MARCH 2014^{1, 2}

Production of energy products

In March 2014 compared to February 2014 an increase is reported for the production of:

- natural gas - by 11.1% to 20 million cubic metres.

A decrease is reported for the production of:

- solid fuels - by 23.6% to 2 176 thousand tonnes;
- electricity - by 6.4% to 3 699 GWh.

Significant drop is observed in the production of petroleum products, which is due to planned repair of production capacities done in March 2014, as:

- unleaded motor gasoline decreases by 97.5% to 3 thousand tonnes;
- transport diesel decreases by 88.6% to 14 thousand tonnes.

No production of the liquefied petroleum gases is reported (Annex, Table 1).

In March 2014 compared to March 2013 an increase is reported for the production of:

- solid fuels - by 77.9.0%.

A decrease is reported for the production of:

- unleaded motor gasoline - by 97.1%;
- transport diesel - by 89.9%;
- natural gas - by 23.1%;
- electricity - by 0.8%.

No change is reported for the production of liquefied petroleum gases.

Deliveries of energy products

In March 2014 compared to February 2014 an increase is reported for the deliveries of:

- liquefied petroleum gases - by 36.4% to 30 thousand tonnes.

A decrease is reported for the deliveries of:

- solid fuels - by 23.3% to 2 352 thousand tonnes;
- unleaded motor gasoline - by 9.4% to 29 thousand tonnes;
- transport diesel - by 14.9% to 120 thousand tonnes;
- natural gas - by 5.4% to 279 million cubic metres;
- electricity - by 2.9% to 2 921 GWh (Annex, Table 2).

¹The survey on energy products is conducted every month in accordance with the Regulation (EO) № 1099/2008 of the European Parliament and of the Council of 22 November 2008 on energy statistics, amended by the Commission Regulation (EU) No 147/2013 of 13 February 2013 as regards the implementation of updates for the monthly and annual energy statistics. The survey aims to submit information on the production and inland deliveries of the main energy products – electricity, solid fuels, natural gas and petroleum products. The reporting units are producers, importers and exporters of energy products. Production and deliveries of the energy products are the main observed indicators.

² Data series can be found on: www.nsi.bg, section Energy/Data.

In March 2014 compared to March 2013 an increase is reported for the deliveries of:

- solid fuels - by 78.2%;
- transport diesel - by 11.1%.

A decrease is reported for the deliveries of:

- unleaded motor gasoline - by 29.3%;
- natural gas - by 13.1%;
- electricity - by 9.9%.

No change is reported for the production of liquefied petroleum gases.

Methodological notes

Solid fuels

Production – includes Hard coal, Lignite and Solid fuels from coal. Producers report quantities, calculated after any operation for removal of inert matter.

Deliveries – quantities delivered to the internal market. They are equal to the total of the deliveries to the different types of consumers: producers' own use, main activity power stations, coking plants and patent fuel plants, industry, iron and steel industry and others.

Petroleum products

Production – includes production of finished products at a refinery or blending plant.

Deliveries – the observed delivery of finished petroleum products from primary sources.

Deliveries of petroleum products are defined as: primary product receipts + gross refinery output + recycled products – refinery fuel + imports – exports – international marine bunkers + interproduct transfers – products transferred – stock changes.

Natural gas

Production – includes all dry marketable production within national boundaries including offshore production. Production is measured after purification and extraction of NGLs and sulphur.

Deliveries – total natural gas, distributed for the internal market, including own use and losses. This is defined as: *Indigenous production + Imports – Exports – Stock change*.

Data are presented in million cubic metres assuming reference gas conditions 15° C and 101.325 kPa.

Electricity

Production – includes produced electricity from Thermal power plants, Nuclear power plant, Hydro power plants, Pumped storage plant and electricity, obtained from wind generators and solar panels.

Deliveries – sum of net produced electricity and net import.
